

ABSTRACT

A wheel assembly for a shoe. A housing is attached to a heel portion of the shoe and defined with an opening. A wheel
5 section is mounted to the housing in a manner such that a pair of wheels of the wheel section can be moved between an operating position in which they are received in the opening of the housing to be partially exposed out of a lower surface of the housing and a non-operating position in which they are
10 taken out of the opening of the housing to be seated on a rear end portion of the shoe. The wheel section includes the pair of wheels, a shaft for supporting the pair of wheels, and a support bracket having one end which is connected to the shaft and the other end which is connected to the shoe by a hinge
15 pin.
